

MALLIKARJUN GAJJI

Bangalore, Karnataka, India (he/him)

+91 95383 08127 — g.mallik.dev@gmail.com — linkedin.com/in/themallik

Senior Backend Engineer with 9+ years of experience owning and evolving revenue-critical distributed systems, leading cross-team technical initiatives, and setting technical direction to improve reliability, data integrity, and system design at scale.

Technical Skills

Languages: Java (Primary), Python, Go

Databases: MySQL, MongoDB, DynamoDB

Cloud & Infra: AWS, GCP, Kubernetes, Jenkins

Distributed Systems: Kafka, Redis, Elasticsearch

Frameworks: Spring Boot, Flask, JUnit, Mockito

Education

IIT Guwahati

Bachelor of Technology in Mathematics & Computing

July 2011 – May 2015

Guwahati, Assam, India

Experience

Tekion

May 2021 – Current

*Senior Software Engineer, **Tech:** Java, Spring Boot*

Bangalore, India

- Architected and led a distributed Financial Statements platform processing 10K+ monthly submissions, achieving 80% test coverage and enabling OEM compliance reporting at scale;
- Led the evolution of the Financial Statements platform from a legacy monolith to domain-aligned microservices, while driving JVM GC optimization and MySQL query/index tuning to improve latency, throughput, and runtime stability for revenue-critical workloads.
- Owned end-to-end design of a high-throughput ledger service handling 1K+ QPS, ensuring strict ACID guarantees through concurrency control and database locking, and leading deep production debugging for correctness-critical workflows.
- Reduced incidents by 95% through rigorous root-cause analysis, production debugging, and proactive support review processes, successfully transforming the Financial Statements service into a revenue-generating product.
- Led a team of 7 engineers to design and deliver a scalable PDF generation service using AWS Lambda, Typst, and Kafka, enabling efficient processing of large financial reports.

Tekion

Oct 2019 – Apr 2021

*Software Engineer, **Tech:** Java*

Bangalore, India

- Built a Release Notes / Knowledge Base platform that improved customer awareness of new features, leading to a significant reduction in support queries.
- Implemented GL Report to derive data from formulas and download it as excel file
- Resolved technical issues and provided technical support to clients and internal teams.

Honestbee

July 2018 – May 2019

*Software Engineer, **Tech:** Ruby, Rails*

Bangalore, India

- Implemented Deliverer Salary compute service which computes the daily salary of a deliverer based on the delivery information given by delivery management service.
- Implemented APIs to interact with Stripe and Cybersource digital payment.

Iamplus Electronics

Sep 2015 – July 2018

*Software Engineer, **Tech:** Python, Go*

Bangalore, India

- Created reservation service. A user can search available restaurants and book a seat through voice command. He will get a confirmation message after couple of minutes and that event will be added to his calendar. Used Yelp APIs.
- Developed a RESTful APIs which fetches data from weather.com API and sends it to user as a conversation sentences like Amazon echo. Caching is also implemented.

Leadership / Extracurricular

- Served as acting Tech Lead, collaborating with Product, QA, and Engineering to review design documents, evaluate trade-offs, and influence system design decisions for high-impact initiatives.
- Mentored interns and junior developers through design doc reviews, code reviews, and technical guidance, accelerating onboarding and improving overall team productivity.
